

EXECUTIVE PROPOSAL

A calmer, faster way to care for every patient.

ReHub connects every patient room to your care team through one shared, live dashboard — so requests are seen, prioritized, and resolved before they get missed.

<10 min

AI-guided

prioritization

Prepared for facility leadership
Rehabilitation · Skilled nursing · Long-term care

Confidential proposal

THE OPPORTUNITY

Better care and smoother operations — without adding staff.

In most facilities, patient requests travel by call light, hallway, and memory. Messages get lost, urgent needs blend in with routine ones, and nurses spend their shift reacting instead of caring. ReHub gives your team one clear, prioritized view of what every patient needs — right now.

4–5 mi

A nurse can walk this far in a single shift. ReHub cuts unnecessary trips.

1 screen

Every request, every room, prioritized — instead of scattered call lights.

<2 sec

From a patient speaking to a prioritized, summarized task on staff screens.

"Why aren't we already using something like this?"

The question we hear most after a first walkthrough. ReHub is designed to feel obvious from day one — for patients, nurses, and administrators alike.

Respond faster

Requests appear instantly, sorted by urgency — the right patient gets help first.

Work calmer

Fewer interruptions and less back-and-forth walking across the floor.

See everything

Leadership gets real visibility into response times and workload.

TODAY'S REALITY

Care teams are doing their best with broken communication.

None of this is a staffing failure. It's a tooling failure. The information a nurse needs is real — it's just scattered, unsorted, and easy to miss.

Constant interruptions

Call lights and hallway asks pull nurses away mid-task, breaking focus dozens of times a shift.

Scattered communication

Requests live on paper, whiteboards, call systems, and in people's heads — never in one place.

Delays that add up

Without prioritization, a patient in real distress can wait behind a routine request.

Endless walking

"Let me go check" repeated all shift means miles of avoidable steps and lost time.

The hidden cost: burnout.

When every request feels urgent and nothing is organized, staff carry a constant mental load. Over time that drives fatigue, turnover, and slower care — the opposite of what a great facility wants.

HOW IT WORKS

From request to care — in seconds, not searches.

Meet Hubi — the AI that quietly runs underneath it all.

Hubi listens to each request, writes a plain-language summary, assigns a priority, and suggests the next step — so staff open a screen that already makes sense instead of a list they have to decode.

Speak naturally

"I need help getting to the bathroom" is understood — no menus, no buttons to learn.

Nothing slips

Every request is logged, visible, and tracked until it's resolved.

Works on what you have

Runs on any tablet or phone browser. No new hardware, no rip-and-replace.

A DAY ON THE FLOOR

Same team. Same building. A very different shift.

WITHOUT REHUB

- ✗ A call light goes off. No one knows why until someone walks over.
- ✗ Three patients need help — but which one is urgent? Nobody can tell at a glance.
- ✗ A request gets passed verbally, then forgotten in the rush.
- ✗ The patient waits, unsure if anyone heard them.
- ✗ Leadership finds out about problems after the fact.

WITH REHUB

- ✓ The request arrives already summarized: who, what room, how urgent.
- ✓ Hubi sorts by urgency — the patient in distress rises to the top automatically.
- ✓ Every task is tracked on screen until it's marked done.
- ✓ The patient hears a warm confirmation that help is on the way.
- ✓ Leadership sees response times and workload in real time.

WHAT CHANGES	BEFORE	AFTER
Knowing what a patient needs	Walk over to find out	✓ Clear summary on screen
Deciding who to help first	Guesswork	✓ AI-sorted by urgency
Tracking open requests	Memory & paper	✓ Live, until resolved
Patient reassurance	Silence	✓ Spoken confirmation
Leadership visibility	After the fact	✓ Real-time dashboard

THE COMMAND CENTER

One live screen your whole team trusts.

● **Live Command Center**
12 rooms · 3 staff on duty

● CRITICAL Room 204 · John M. "I'm having trouble breathing" Critical · 0.99	● IMPORTANT Room 110 · Mary R. Needs help to the bathroom High	● ROUTINE Room 305 · Sam P. Requested a glass of water Low
---	---	---

Live patient dashboard

Solves: scattered, invisible requests.

Staff win: one screen shows every open need, sorted.

Patient win: nothing they ask for gets lost.

AI prioritization

Solves: not knowing what's urgent.

Staff win: the right patient surfaces first, automatically.

Patient win: real emergencies aren't stuck in line.

INTELLIGENCE & COMMUNICATION

Hubi does the thinking so staff can do the caring.

**Smart urgency detection**

Solves the "everything feels urgent" problem. Hubi reads what a patient actually said and assigns a clear priority — with a deterministic safety rule that forces true emergencies to Critical, every time.

**Automatic summaries**

Solves decoding messy requests. Every patient message becomes a clean summary, a suggested action, and a recommended staff response — ready to act on in one glance.

**Voice for patients**

Solves the barrier of buttons and apps. Patients simply speak — "I need my nurse," "Tell Sarah I'm in pain" — and Hubi routes it to the right person and replies in a calm, friendly voice.

**Staff copilot**

Solves mental overload. Staff can ask Hubi in plain language — "Summarize Room 101," "Who needs help now?" — and get an instant, organized answer.

A safety-first design.

Critical events never depend on AI guessing. Rules run first, priority second, AI reasoning third — so "I can't breathe" is always Critical, instantly, no matter what.

VISIBILITY & CONTROL

Everything leadership needs to run a tighter floor.

Analytics that answer questions

Ask in plain English: "What rooms generated the most requests today?" or "Who responded fastest?" — and get an answer, not a spreadsheet.

Smart notifications

The right person is alerted for the right request — critical needs escalate, routine ones don't create noise.

Administrator overview

Rooms, staff, response times, and workload — one operational view for the people accountable for it.

Secure cloud platform

Runs in a secure cloud with role-based access — no servers to maintain, available wherever your team works.

ON THE ROADMAP

Clearly labeled as future direction — not in place today.

EHR integrations

Connect requests and notes to your records system.

Family updates

Optional, permissioned updates for loved ones.

Wearable alerts

Push critical requests to staff devices.

PRODUCTIVITY

Give your team their time back.

When requests are clear and sorted, staff stop guessing and stop backtracking. The same people get more done — and spend it on patients, not logistics.

Fewer

wasted trips

Staff know what's needed before they walk in — no "let me go check."

Faster

first response

Urgent requests rise to the top automatically, the moment they arrive.

Less

mental load

One organized list replaces a head full of half-remembered asks.

More time at the bedside

Time saved on coordination is time returned to direct patient care — the work that actually matters.

Better organization, instantly

No training marathon. The dashboard is the workflow — staff are productive on day one.

Figures describe the operational effect of organized, prioritized communication and are illustrative — actual results vary by facility size, staffing, and workflow. The 4–5 mile figure reflects published research on nurse walking distances per shift.

TWO SIDES, ONE WIN

Patients feel heard. Staff feel relief.

For patients

- **Faster help** — requests are seen and acted on right away.
- **Feeling heard** — a spoken confirmation that someone is coming.
- **Easy communication** — just speak; no buttons or apps to learn.
- **More personalized care** — staff arrive already knowing the need.
- **Dignity & calm** — no lying there wondering if anyone heard.

For staff

- **Less stress** — no more juggling everything in your head.
- **Clear priorities** — you always know who to help first.
- **Easier workflows** — one screen, no decoding, no hunting.
- **Cleaner communication** — messages routed to the right person.
- **Reduced overload** — Hubi handles the busywork around each request.

Patients should never feel alone.

Hubi is always available — friendly, calm, and fast. Even at 3am, a patient has someone to talk to, and a request that won't be forgotten.

BUILT WITH CARE

Designed around healthcare privacy from the start.

ReHub is built using healthcare privacy and security best practices, and is designed to support HIPAA compliance when implemented appropriately within your environment.

**Secure authentication**

Access is protected by modern authentication, so only the right people get in.

**Encrypted communication**

Data is encrypted in transit between devices and the platform.

**Secure cloud infrastructure**

Hosted on trusted, secure cloud infrastructure with managed reliability.

**Role-based permissions**

Patients, nurses, and administrators each see only what they should.

**Audit logging**

All actions and key events are recorded for accountability and review.

**Privacy-first design**

We minimize what's stored and keep sensitive data out of logs by design.

ReHub does not claim any certification or regulatory approval it has not received. HIPAA compliance is achieved jointly through proper configuration, agreements, and operational practices within each facility's environment.

THE WHOLE BUILDING WINS

One change, felt by everyone.

Patients

Get help faster, feel genuinely heard, and experience care that feels personal and attentive.

Nurses & therapists

Spend less energy chasing information and more on the patients in front of them.

Administrators

Gain real visibility into response times, workload, and where to focus improvements.

Facility leadership

Modernize care, support staff retention, and strengthen your reputation with families.

A modern facility, without a disruptive overhaul.

ReHub layers on top of how your team already works. No new hardware, no months of rollout — just a clearer, calmer way to communicate that your staff will actually want to use.

ONBOARDING

Live in under 10 minutes.

No installation project. No IT ticket queue. You can have a working facility set up before the meeting ends.

1

Create facility

Add your facility and rooms in a guided setup.

2

Share the code

Patients & staff join with a simple facility code.

3

Open the dashboard

Staff open the command center on any tablet.

4

Start caring

Requests flow in, prioritized from the first minute.

**No new hardware**

Works on tablets and phones you already have.

**No training marathon**

If your team can use a phone, they can use ReHub.

**Start small, scale up**

Pilot one wing, then roll out floor by floor.

IN CLOSING

We're not just offering software. We're helping your facility provide better care.

ReHub makes daily operations simpler and gives your team back the time and focus to do what they came here to do — care for people. It's the kind of change patients feel immediately and staff thank you for.

See it on your own floor.

We'd love to set up a short walkthrough with a live demo of your facility — no commitment, no disruption. You'll know within minutes whether it's right for your team.
